

Speciality Contact Lens Fitting

At Eyecare Eyewear, we believe everyone deserves clear, comfortable vision. While standard contact lenses work well for many, some eye conditions require a more tailored approach.

That's why we provide custom contact lens fitting, delivering advanced solutions for complex vision needs like high astigmatism and keratoconus.

Why Specialty Lenses?

Unlike regular lenses, specialty contacts are custom-fitted to your eye's specific shape. This means:

- **Sharper Vision:** Correcting distortions traditional lenses can't fix.
- **Superior Comfort:** Fitting precisely, reducing irritation and dryness.
- **Greater Stability:** Lenses stay perfectly centered for consistent, clear sight.

Solutions for Astigmatism

If you have high or irregular astigmatism, we offer options like custom soft toric lenses, rigid gas permeable (GP) lenses, and hybrid lenses. These precisely correct your vision, overcoming the limitations of off-the-shelf options.

Hope for Keratoconus

For keratoconus, where the cornea thins and bulges, specialty lenses are often life-changing. Options like GP lenses and scleral lenses (larger lenses that vault over the cornea, providing immense comfort and clear vision) neutralize distortions, significantly improving sight.

Our experienced optometric team uses advanced technology to find your perfect fit. Don't settle for less than your best vision.
